

/ OUR COMMITMENT /

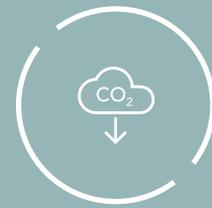

Landmark for sustainability.

Responsibility is not an abstract concept, but an imprint that remains over time. With its choices, Landmark intends to leave a positive and lasting mark, made of **sustainable processes, attention to people, and respect for the environment.**

Reducing waste, limiting emissions, enhancing the territory, and ensuring safety are concrete actions that define our identity. Every product and every investment is proof of a **commitment** that does not stop at the present, but defines the trace we want to leave for the future and for the new generations.

Our Certifications

Responsibility leaves a mark.

We give what we take.

For Landmark, sustainability means **balancing** what is used with what is returned to the planet. Each phase of the production process is designed to **reduce waste** and **reintroduce resources**.

Processing scraps is reused instead of being discarded, replacing primary raw materials. This **circular approach** turns production residues into **new resources** through responsible practices.

Less impact, more **committment**.

Reducing emissions is one of Landmark's central objectives, both in terms of CO₂ and polluting substances. The commitment starts from the **choice of raw materials**, for the most part coming from nearby areas, and continues with **constant control of consumption** during production, ensuring the company a reduced carbon footprint compared to the industry average.

The adoption of **efficient technologies** and **advanced filtration systems** guarantees the maintenance of rigorous environmental standards for pollutant emissions.

Energy Efficiency

Efficient energy solutions.

An efficient production site is the starting point to guarantee **responsible processes**. Landmark has designed it according to **rigorous sustainability standards**, with particular **attention to energy consumption, recycling and reuse**.

The same approach extends to logistics, where low-consumption vehicles and smart systems **optimize space management and reduce waste**. **Innovation and responsibility** proceed together to contain energy impact and decrease emissions in the long term.

FACTS & DATA

Built-In Performances

Hygienic, healthy, durable and recyclable.

Porcelain is a solid and conscious choice for **sustainable building**. It is **safe** because it resists fire without releasing harmful substances, such as volatile organic compounds (VOCs), formaldehyde, PVC, and plastic, **healthy** because it does not favor the proliferation of molds and bacteria, and **durable** because it keeps its performance unchanged for decades.

At the end of its life cycle, **it can be recycled**, continuing to generate value for people and for buildings.

Care for people, respect for the planet.

For Landmark, **people** and the **territory** are resources to be valued and protected. The **safety** and **well-being** of employees, together with **social responsibility** towards the community, guide every corporate choice.

From the design of workspaces to initiatives for the **economic development of the territory**, Landmark's commitment translates into concrete actions that combine **social care** and **respect for the environment**.

Certified sustainability.

Landmark's attention to sustainability is proven by the achievement of **environmental and product certifications** recognized at the international level. These standards attest not only to the **high quality of production processes**, but also to the **transparency** with which data are communicated and to the **safety** guaranteed by the products.

In this way, Landmark offers to designers, architects, and end clients **concrete guarantees**, facilitating the integration of our solutions into sustainable building projects.
